

# Provision Application

## Requirements

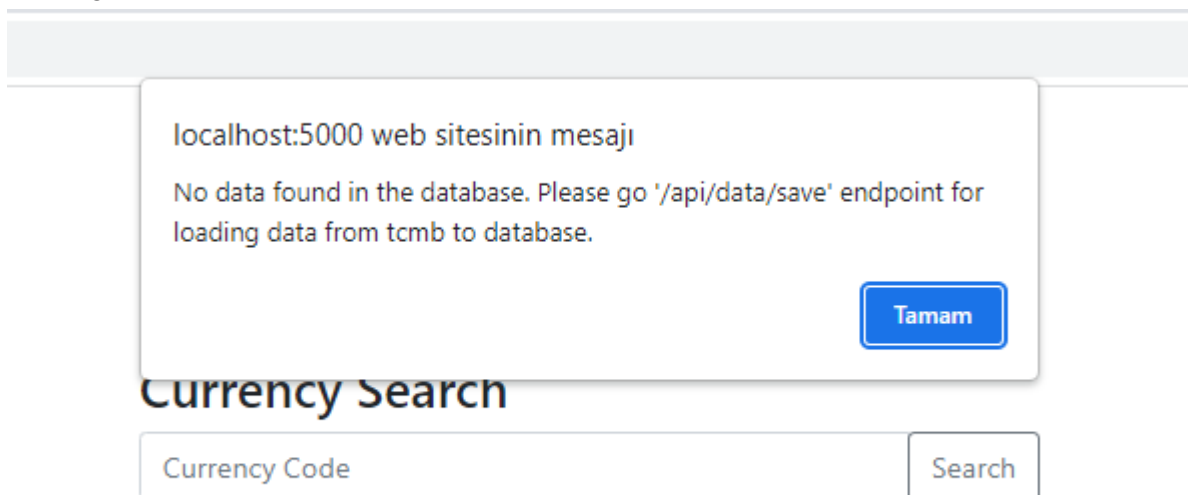

- .NET 5.0 SDK
- PostgreSQL & pgAdmin

## Before Running the Application

- Modifying the [PostgreSQL](#) key in the [appsettings.json](#) where in the [ProvisionSecond.MVCApplication](#) directory. (for user password etc.)
- [Add-Migration](#) and [Update-Database](#) commands for ef core.

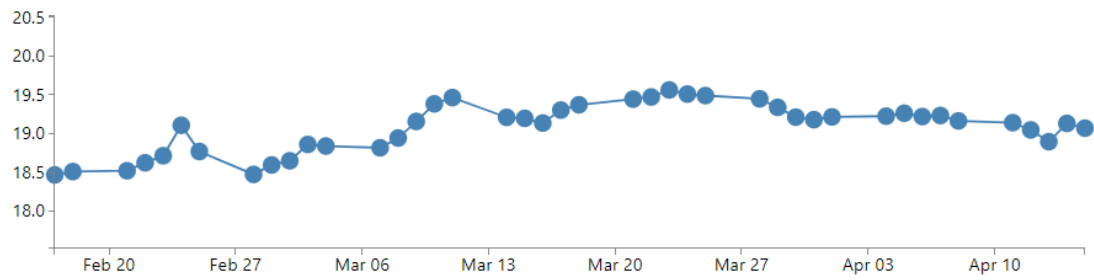

## Screenshots After Running the Application

- The database is empty when starting and because of that we are facing with this alert message.

- Then we go to [/api/data/save](#) endpoint and after database is filled with data we are automatically redirected to the [/currency/index](#) page.
- Now we can search for currencies.

## Currency Search
